

Sales Page Problems?

Script:

All sales pages can go wrong if they don't have the right things in there...

First and most obviously.. the offer might be bad...

Secondly... the copy might be bad

Thirdly... you might not have a VSL

Forthly... you don't answer their questions...

And lastly... you might not get their attention...

Is the headline fine... does it get people's attention?

Do you have a VSL?

Is the copy badass, is the offer badass?

Make that thought process and identify the source of the problems... website analytics really help you out here, specially heatmaps and session recordings, if you have them... have a look.
